

## PRODUCT GUIDANCE SHEET

### ALKALINE ALLOY WHEEL CLEANER

#### OVERVIEW:

A non-acidic but powerful alloy wheel cleaner. Most alloy wheel cleaners are based on strong acids which may cause corrosion and damage to wheels, brake discs, callipers and paintwork. Acidic cleaners can also damage concrete and tarmac when rinsed off.

Our cleaner uses a combination of detergents and stain removers in an alkaline formulation to remove grease, brake dust, dirt and road film without corroding parts or damaging paintwork.

#### APPLICATIONS:

For the cleaning of Steel, Aluminium and Alloy wheels, also safe for use on plastic wheel trims.

#### DIRECTIONS FOR USE:

Can be used neat or diluted up to 1 part product to 2 parts water depending upon degree of soiling and equipment being used.

Rinse the wheel with clean water then apply the cleaner generously with a trigger spray and allow to penetrate for up to 5 minutes. Do not allow to dry.

Very heavy soiling may require agitation using a sponge or suitable wheel brush.

Rinse off thoroughly with clean water.

#### HEALTH & SAFETY:

NOTE: COSHH assessments should be performed in line with current legislation to determine the required precautions.

#### DANGER

May be corrosive to metals.

Causes severe skin burns and eye damage.

Keep out of reach of children.

Wear protective gloves/protective clothing/eye protection/face protection.

IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower.

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

IF SWALLOWED: rinse mouth. Do NOT induce vomiting.

**See MSDS for further information.**
